Advanced Technologies and Methodologies
for Risk Management in the Global Transport
of Dangerous Goods C. Bersani 2008-09-23
In the last few years, logistics has become a
strategic factor for development and
competition. In fact, research and
development activities have traditionally

faced the management of supply chain and
international transport focusing on two main
aspects: speed and efficiency. However,
several vulnerabilities have recently been
highlighted under a safety and security
viewpoint. The weakness of the logistic
chains has become more evident with the
beginning of the new millennium. Terrorist
attacks, such as the 11th of September
2001 in the USA, have caused the
introduction of new rules and procedures,
which affect the overall logistics showing
the vulnerability of the global economy. So,
nowadays, it would appear anachronistic to
carry out an exhaustive research activity on
the supply chain with no relation to the
various typologies of risk, which may affect
it. This book aims to effectively represent
the current status of research on dangerous
goods transport.
