The Joy of Science Richard A. Lockshin

2007-11-05 This book reveals that scientific logic is an extension of common, everyday logic and that it can and should be understood by everyone. Written by a practicing and successful scientist, it explores why questions arise in science and looks at how questions are tackled, what constitutes a valid answer, and why. The author does not bog the reader down in technical details or lists of facts to memorize. He uses accessible examples, illustrations, and descriptions to address complex issues. The book

should prove enlightening to anyone who has been perplexed by the meaning, relevance, and moral or political implications of science.

Economics and Ageing José Luis Iparraguirre

2018-12-11 This upper level textbook provides a coherent introduction to the economic implications of individual and population ageing. Placing

economic considerations into a wider social sciences context, this is ideal reading not only for advanced undergraduate and masters students in economics, health economics and the economics of ageing, but also policy makers, students, professionals and practitioners in gerontology, sociology, health-related sciences and social care. This volume introduces the different conceptualisations of age and definitions of 'old age', as well as the main theories of individual ageing as developed in the disciplines of biology, psychology and sociology. It covers the economic theories of fertility, mortality and migration and

describes the four main frameworks that can be used to study economics and ageing, namely the life cycle, the overlapping generations, the perpetual youth and the dynastic models.

Causal Pluralism in the Life Sciences Kolja Ehrenstein 2022-03-28 This book takes a new approach to the debate on causal pluralism in the philosophy of biology by asking how useful pluralism is instead of debating its truth. The core thesis in this work is that many problems do not hinge on the question of whether or not we

subscribe to causal pluralism. As one step in this central argument, the author develops an account that reasonably distinguishes pluralism from monism; in another step he studies cases that allegedly motivate causal pluralism in biology. Examining these cases shows how pluralism is often irrelevant and why pursuing pluralism is sometimes dangerous, since it may generate pseudo solutions to persistent philosophical problems. This book offers a systematic approach to this subject matter and argues that we might have overestimated the significance of the monism-pluralism distinction and at the same time

failed to see the risks of pursuing causal pluralism.

World Religions and Cults Volume 2 Bodie Hodge
2016-05-01 Recognize and refute the Far East false religions What do these religions teach and why? How can a Christian be an effective witness for Jesus Christ when presented with ideas that are so different from a biblical perspective? How can these religions be refuted and biblical authority be the standard? This eye-opening

second volume deals with many Eastern religions like Hinduism, Taoism, New Age, Sikhism, Confucianism, Shinto, and Buddhism, as well as other pagan-based systems like Witchcraft, Voodoo, and Greek mythology (and many more)!

This volume dives into these styles of religions and looks at their origins and their basic tenets as well as why they fall so short. Understanding the basic tenets of these religions helps the Bible believer see the flaws in these philosophies and discern how to be an effective witness for Jesus Christ while standing on the authority of the Bible.

For college instructors, students, or anyone interested in biology.

Formal Ontology in Information Systems P. Garbacz 2014-09-05 Formal Ontology in Information Systems (FOIS) is the flagship conference of the International Association for Ontology and its Applications (IAOA). Its interdisciplinary research focus lies at the

intersection of philosophical ontology, linguistics, logic, cognitive science, and computer science, as well as in the applications of ontological analysis to conceptual modeling, knowledge engineering, knowledge management, information-systems development, library and information science, scientific research, and semantic technologies in general. As in previous years, FOIS 2014 was a nexus of interdisciplinary research and communication. The current proceedings is divided into four main sections, dealing with: foundations; processes, agency and dispositions; methods and tools; and applications. The last of

these covers a broad spectrum of areas, including in particular biology and medicine, engineering, and economy. For the first time in its history, the conference hosted a special track: an ontology competition, the aim of which was to encourage authors to make their ontologies publicly available and to allow them to be evaluated according to a set of predetermined criteria. Papers discussing these ontologies can also be found in this volume. The book will be of interest to all those whose work involves the application of ontologies, and who are looking for a current overview of developments in formal ontology.

Top-Down Causation and Emergence Jan

Voosholz 2021-08-06 This book presents the latest research, conducted by leading philosophers and scientists from various fields, on the topic of top-down causation. The chapters combine to form a unique, interdisciplinary perspective, drawing upon George Ellis's extensive research and novel perspectives on topics including downwards causation, weak and strong emergence, mental causation, biological relativity, effective field theory and levels in nature. The collection also serves as a Festschrift in honour of George Ellis' 80th birthday. The

extensive and interdisciplinary scope of this book makes it vital reading for anyone interested in the work of George Ellis and current research on the topics of causation and emergence.

Biomimetics Amitava Mukherjee 2010-03-01

Nature's evolution has led to the introduction of highly efficient biological mechanisms. Imitating these mechanisms offers an enormous potential for the improvement of our day to day life. Ideally, by bio-inspiration we can get a better view of nature's capability while studying its models and adapting it for our benefit. This book takes us into the interesting world of biomimetics and describes

various arenas where the technology is applied.

The 25 chapters covered in this book disclose recent advances and new ideas in promoting the mechanism and applications of biomimetics.

Zeik Herman Brusselmans 2014-09-10 De moordbrigade van Gent loste in het begin van de jaren zestig procentueel gezien de meeste moorden van heel West-Europa op, was de eerste brigade ter wereld die over een allochtoonse inspecteur beschikte, en de chef van de brigade _ commissaris Übertrut _ had maar één arm. Samen met zn team, bestaande uit de inspecteurs Zeik, El Bazaz, Compas en Broekgat,

probeert hij de Gentse regio vrij te houden van vuige moordenaars. Zullen ze ook in hun opzet slagen als een onbekende misdadiger opduikt die meisjes wurgt en symbolisch bedoelde getallen aanbrengt op hun naakte rug? De tijd dringt, de stress wordt erger, de helse spanning is te snijden. Tot de absolute held van het verhaal, inspecteur Zeik, een gouden ingeving krijgt. Zeik is een schitterend opgebouwde misdaadroman in het spoor van Agatha Christie, Georges Simenon en andere grootheden op het gebied van goed geconstrueerde whodunits die de lezer uren op het randje van zn stoel nagelen. Herman

Brusselmans bewijst dat hij ook in dit genre kan uitgroeien tot een grootmeester. Derhalve is de tweede Zeik-roman in voorbereiding, getiteld De moord op de poetsvrouw van Hugo Claus.

Herman Brusselmans (1957) publiceerde meer dan zestig romans. Hij wordt zowel verguisd als verafgood. Hij is een zeer belangrijk schrijver.

Herman Brusselmans is een fenomeen. knack

Logic Programming and Nonmonotonic Reasoning

Pedro Cabalar 2013-09-12 This volume contains the refereed proceedings of the 12th International Conference on Logic Programming and Nonmonotonic Reasoning, LPNMR 2013, held in September 2013 in Corunna, Spain. The 34 revised full papers (22 technical papers, 9 application description, and 3 system descriptions) and 19 short papers (11 technical papers, 3 application descriptions, and 5 system descriptions) presented together with 2 invited talks, were carefully reviewed and selected from

91 submissions. Being a forum for exchanging ideas on declarative logic programming, nonmonotonic reasoning, and knowledge representation, the conference aims to facilitate interactions between those researchers and practitioners interested in the design and implementation of logic-based programming languages and database systems, and those who work in the area of knowledge representation and nonmonotonic reasoning.

Gezondheidsbevordering en Zelfmanagement
Barbara Sassen 2016-07-28 Hoe motiveer je een patiënt tot een gezondere leefstijl? En hoe versterk je het vermogen van een patiënt om de regie te voeren over zijn eigen gezondheid? Dat

zijn twee belangrijke onderwerpen die in 'Gezondheidsbevordering en zelfmanagement' worden besproken. In dit boek wordt gezondheid op micro-, meso- en macroniveau bekeken. De eerste twee hoofdstukken bespreken verschillende visies op gezondheid, gezondheidsrisico's en factoren die de volksgezondheid beïnvloeden. In de volgende hoofdstukken ligt het accent op preventie, gezondheidsbevordering en zelfmanagement van de patiënt, waarbij Intervention Mapping het uitgangspunt is van de gehanteerde systematiek. Andere onderwerpen die aan bod komen zijn

chronische gezondheidsproblemen, het sociale netwerk van de patiënt, problematiek rond verwerking, en eHealth, maar natuurlijk ook de relatie tussen de verpleegkundige en de patiënt, en de rol van de verpleegkundige als gezondheidscoach. Nieuw in deze editie zijn een training 'bevorderen van zelfmanagement' en een training 'de verpleegkundige als gezondheidscoach'. Een belangrijke aanvulling is de onlineleeromgeving met links, leervragen en samenvattingen. Kijk hiervoor op www.studiecloud.nl. 'Gezondheidsbevordering en zelfmanagement' is bedoeld voor de bachelor-

(hbo-v, niveau 5) en mastersopleidingen voor verpleegkundigen. Het boek sluit aan bij het Beroepsprofiel Verpleegkundige 2020 en Verpleegkundig specialist 2020. Ook sluit het aan bij de CanMeds met de competenties van gezondheidsbevorderaar en reflectieve evidence-based werkende professional. Een onmisbaar boek voor de competent voorlichtende professional. Dr. Barbara Sassen is als docent en postdoc verbonden aan de University of Applied Science, Faculteit Gezondheidszorg, Hogeschool Utrecht. Daarnaast geeft zij masterclasses en trainingen over het thema 'de rol van de

zorgprofessional in het bevorderen van zelfmanagement van de patiënt'.

Crossing Languages and Research Methods

Cindy Brantmeier 2009-11-01 In 2002, this series was launched with its first volume, Literacy and the Second Language Learner, which contained many noteworthy research studies in the learning and teaching of second language reading. The selection of this theme for the series' entry on the scene demonstrates the importance of the topic of second language reading. Because reading plays a key role in the act of acquiring new knowledge, it is important to understand this

complex process. The series again explores this multifaceted and fruitful area of inquiry in this, its seventh volume. In recent years, an explosion of work that strives to create a more complete understanding of second language reading has occurred and researchers today are making gains in fitting together a model of second language reading. This current volume brings together a range of high quality analyses of adult foreign language reading across languages and research methods. It provides important research findings that will assist foreign language readers and those who support their efforts.

Essential Biology Chapter 12 Campbell 2003

Pharmaceutical Economics and Policy Stuart O.

Schweitzer 2018-05-01 Pharmaceuticals

constitute a relatively small share of the total healthcare expenditure in most developed economies, and yet they play a critical role in the ongoing debate over how best to advance, improve, and afford healthcare. Despite this, and perhaps because of this, the industry has had, for

many years, an outsized claim to fame and controversy, praise and criticisms, support and condemnation. Unfortunately, many participants in the debate do not fully understand the complexities of the industry and its role in the overall healthcare system. The analytical tools of economics provide a strong foundation for a better understanding of the dynamics of the pharmaceutical industry, its contribution to health and healthcare, its dual and often conflicting priorities of affordability and innovation, as well as the various private and public policy initiatives directed at the sector. This third edition of a

uniquely comprehensive and balanced examination of the industry includes several new chapters on important topics such as the full-fledged generics sector, the arrival of biosimilars or generic biological drugs, the global consolidation of manufacturers, the evolving reimbursement landscape, and the emergence of the world's most populous nations, such as China, India, and Brazil, as both suppliers and

consumers of pharmaceutical products. Other chapters have been fully rewritten or extensively updated, covering such important topics as the cost efficiency of research and development, pace of new innovations, economic evaluation and value-based pricing of drugs, and public and private interventions in the industry.
