Mathematics Education for Sustainable Economic Growth and Job Creation

David Burghes 2021-08-23 Mathematics Education for Sustainable Economic Growth and Job Creation considers the need for young employees to be capable and confident with transferable knowledge and skills in mathematics and statistics in order to support economic growth in developing countries in an increasingly digital age. This book draws on differing international perspectives in relation to mathematics education for sustainable economic growth and job creation. The contributors include education researchers and those involved in policymaking for both developing countries and beyond. Within each

chapter, there is a reflection from the authors on their experiences in educational systems and policy development or research studies, which contribute to sustainable economic growth in different countries. As well as considerations of economies and job creation, the scholarship delves further into developing a critically aware citizenship through mathematics education. Extending current thinking about the role of mathematics education and educating students for future needs, this book will be of great interest for academics, researchers and postgraduate students in the field of mathematics education, STEM education and sustainability education.

Handbook of Research on Human Capital and People Management in the Tourism

Industry Costa, Vânia Gonçalves
2020-10-09 The tourism industry is an industry of people and is directly dependent on the performance of activities, skills, professionalism, quality, and competitiveness. Approaching the perspective of people management stresses the need to humanize companies, making empowerment and commitment easier. These are key to setting “talents” and, more importantly, to encouraging these individuals to put their creative capacities to the service of the companies for which they work. Only by being collaborative internally does business gain competitive capacity in the global marketplace. This aspect is crucial in tourism in the face of strong and growing competition in the sector.
Human Capital and People Management

in the Tourism Industry is a crucial reference source that reveals groundbreaking human resource policies for tourism destinations, revolutionary human capital managerial business approaches in tourism, innovative tourism training perspectives, and new tourism qualification prospects. Featuring research on topics such as intellectual capital, human resource management, and financial performance, this book is ideally designed for business managers, entrepreneurs, human resource officers, industry professionals, academicians, students, and researchers.

Knowledge, Skill and Artificial Intelligence Bo Göranson 2012-12-06
Issues raised by the Theory of

Knowledge, a central theme in the development of Artificial Intelligence, are the main topic of this book. The major questions are: How is the expert's knowledge to be elicited, what are the limits and possibilities? How can skill be developed and maintained in a more and more computerized and abstract working life? This last question is also closely related to the discussion on programs for education and training in society and working life. Long term effects on skill formation in working life in relation to new technology are a very important area of research. Case studies form the basis for philosophical reflections with the main concept of tacit knowledge as the central issue of skill and new technology. To a great extent the

discussion is based on current case studies of professional groups with experience in advanced computer technology. The contributions of this book demonstrate the complicated nature of human knowledge. They introduce different theoretical perspectives on the issue of knowledge acquisition and elicitation.

Sport Coaching with Diverse

Populations James Wallis 2020-10-26
Sports coaches apply their skills in a wider variety of contexts, and with a more diverse range of athletes and participants, than ever before. This book introduces the professional competencies and knowledge needed to build successful working

relationships across the different communities and groups with which coaches operate. The book offers important insight for coaches who work with specific populations including different age groups; black, Asian and minority ethnic (BAME) people; those of different gender or sexual orientation; individuals with disabilities or illness; the socio-economically disadvantaged; and refugees. Drawing on real-world case studies, such as coaching girls in combat sports and coaching cardiac rehab patients, and adopting a critical approach to values, philosophy and pedagogic process, this book argues that understanding the recipient of coaching and their particular needs is as important as content knowledge. With contributions from leading

coaching researchers and practitioners, this is important reading for developing coaches, students on sports courses and other individuals involved in the sport pedagogy domain who seek to gain a better understanding of the demands of meeting the specific needs of people in the coaching process.

Smart and Sustainable Planning for Cities and Regions Adriano Bisello

2021-03-22 This book offers a selection of research papers and case studies presented at the 3rd international conference “Smart and Sustainable Planning for Cities and Regions”, held in December 2019 in Bolzano, Italy, and explores the concept of smart and sustainable planning, including top contributions from academics, policy makers, consultants and other professionals.

Innovation processes such as co-design and co-creation help establish collaborations that engage with stakeholders in a trustworthy and transparent environment while answering the need for new value propositions. The importance of an integrated, holistic approach is widely recognized to break down silos in local government, in particular, when aimed at achieving a better integration of climate-energy planning. Despite the ongoing urbanization and polarization processes, new synergies between urban and rural areas emerge, linking development opportunities to intrinsic cultural, natural and man-made landscape values. The increasing availability of big, real-time urban data and advanced ICT facilitates frequent assessment and continuous

monitoring of performances, while allowing fine-tuning as needed. This is valid not only for individual projects but also on a wider scale. In addition, and circling back to the first point, (big) urban data and ICT can be of enormous help in facilitating engagement and co-creation by raising awareness and by providing insight into the local consequences of specific plans. However, this potential is not yet fully exploited in standard processes and procedures, which can therefore lack the agility and flexibility to keep up with the pulse of the city and dynamics of society. The book provides a multi-disciplinary outlook based on experience to orient the reader in the giant galaxy of smart and sustainable planning, support the transposition of research into

practice, scale up visionary approaches and design groundbreaking planning policies and tools.

How America Compares Rodney Tiffen
2019-11-13 This book is a reference

work with an encyclopedic range, offering contemporary and systematic comparisons between the United States and 17 other economically advanced, stable liberal democracies, as well as some more global comparisons. It offers international data on as many aspects of social life as possible, from taxation to traffic accidents, homicide rates to health expenditure, and interest rates to internet usage. Wherever possible, it offers not only the most recent available data but also trends over decades. The discussion focuses on changes over time and comparisons between countries. Sometimes the contrasts are striking; sometimes the commonalities are more instructive. Often national political debates are conducted in a vacuum, and examining comparative data on policies,

performance, and prospects can give a better perspective.

Engineering Education John Heywood 2005-11-11 A synthesis of nearly 2,000 articles to help make engineers better educators While a significant body of knowledge has evolved in the field of engineering education over the years, much of the published information has been restricted to scholarly journals and has not found a broad audience. This publication rectifies that situation by reviewing the findings of nearly 2,000 scholarly articles to help engineers become better educators, devise more effective curricula, and be more effective leaders and advocates in

curriculum and research development. The author's first objective is to provide an illustrative review of research and development in engineering education since 1960. His second objective is, with the examples given, to encourage the practice of classroom assessment and research, and his third objective is to promote the idea of curriculum leadership. The publication is divided into four main parts: Part I demonstrates how the underpinnings of education—history, philosophy, psychology, sociology—determine the aims and objectives of the curriculum and the curriculum's internal structure, which integrates assessment, content, teaching, and learning Part II focuses on the curriculum itself, considering such key issues as content organization,

trends, and change. A chapter on interdisciplinary and integrated study and a chapter on project and problem-based models of curriculum are included Part III examines problem solving, creativity, and design Part IV delves into teaching, assessment, and evaluation, beginning with a chapter on the lecture, cooperative learning, and teamwork The book ends with a brief, insightful forecast of the future of engineering education. Because this is a practical tool and reference for engineers, each chapter is self-contained and may be read independently of the others. Unlike other works in engineering education, which are generally intended for educational researchers, this publication is written not only for researchers in the field of

engineering education, but also for all engineers who teach. All readers acquire a host of practical skills and knowledge in the fields of learning, philosophy, sociology, and history as they specifically apply to the process of engineering curriculum improvement and evaluation.

Nonlinear Pedagogy and the Athletic Skills Model

James Rudd 2021-06-27

This book offers an ecological conceptualisation of physical literacy. Re-embracing our ancestry as hunter gatherers we gain a new appreciation and understanding of the importance of play, not only in terms of how children learn, but also in showing us as educators how we can lay the foundations for lifelong physical activity. The concept of physical literacy has been recognised and understood throughout history by

different communities across the globe. Today, as governments grapple with the multiple challenges of urban life in the 21st century, we can learn from our forebears how to put play at the centre of children's learning in order to build a more enduring physically active society. This book examines contemporary pedagogical approaches, such as constraints-led teaching, nonlinear pedagogy and the athletic skills model, which are underpinned by the theoretical framework of Ecological Dynamics. It is suggested that through careful design, these models, aimed at children, as well as young athletes, can (i) encourage play and facilitate physical activity and motor learning in children of different ages, providing them with the foundational skills needed for

leading active lives; and (ii), develop young athletes in elite sports programmes in an ethical, enriching and supportive manner. Through this text, scientists, academics and practitioners in the sub-disciplines of motor learning and motor development, physical education, sports pedagogy and physical activity and exercise domains will better understand how to

design programmes that encourage play and thereby develop the movement skills, self-regulating capacities, motivation and proficiency of people, so that they can move skilfully, effectively and efficiently while negotiating changes throughout the human lifespan.
